

Infor10 ERP Express Quality Management (VISUAL)

Improve your business.

Increasing productivity, while maintaining and improving quality, is one of the primary goals for every manufacturer like you today. Infor10™ ERP Express Quality Management (VISUAL) brings control, consistency, and predictability to your product lifecycle and supply management activities. ERP Express Quality Management features advanced product quality planning, inspection and control planning, non-conformance management, quality traceability, embedded statistical process control, and preventative and corrective action capabilities. All of these help you to bring product to market faster with superior quality performance.

Leverage experience.

ERP Express Quality Management is a fully integrated enterprise system that addresses quality assurance issues in specific areas of your operations. You can establish, track, and manage every engineering activity and supply chain expectation while supporting business growth and profitability goals. You can create critical manufacturing specifications for products, processes, equipment, and measuring devices, and improve enterprise team collaboration with vendors, customers, and employees. ERP Express Quality Management provides tools to help you automate associated design, pre-production, production, and post-production activities; expertly manage business performance; and easily collect, control, and analyze quality system data.

ERP Express Quality Management is the powerful, comprehensive, best-of-breed quality management solution you need to help you increase productivity, improve quality, and gain a competitive advantage.

Benefit from a functionally rich, easy-to-use quality management system that extends and integrates quality performance management across all aspects of your business.

Fit your specific business.

ERP Express Quality Management focuses on your complete supply chain, so you can develop, track, inventory, schedule, and perform with ease the tedious maintenance involved with tracking skills, training, qualifications, productivity, and performance. You can use it to manage skip-lot and vendor performance information, and perform incoming inspections, then compare the information against your internal receiving requirements. You can schedule all preventive maintenance and reactive maintenance tasks, as well as detect, assign, and track continuous improvement activities and non-conformances. In addition, you can use the system-wide corrective action and eight discipline reports to manage assignments and employee performance.

Using the supply chain capabilities, you can assess and control overall business performance, manage audits, and determine the true cost of quality. These areas include:

- Engineering project management to drive short- and long-term engineering activities such as new product development and new OEM projects

- Product data management to unite part master information, bill of material detail, design characteristics, and key production specifications
- Document management and data management for centralized location, change history, and document audits for electronic and physical documents
- Inspection plans, FMEAs, and control plans to maintain critical product and process specifications with associated equipment, device, inspection, and control charting
- Process capability and statistical process control to perform management direction, planning, gauge capability, process control and capability analysis, sampling plan preparation, and process detail documentation
- Automated preventive maintenance scheduling to schedule and track all preventive and reactive maintenance tasks
- Nonconformance and quality traceability to detect, assign, and track continuous improvement activities using complete problem-solving details
- Corrective actions and eight discipline reports to manage assignments and performance
- Cost of quality and audit management for access and control over company-wide business performance

ERP Express Quality Management also supports a wide range of industry standards, including:

- ISO 9001:2000 and ISO 9004:2000—international quality management and performance improvement standards
- ISO/TS 16949—automotive industry
- AS9000 and AS9100—aerospace industry

See results now.

Infor10 ERP Express Quality Management (VISUAL) works the way you want to conduct business. It is designed by people who understand quality assurance, and how to turn quality management into a strategic capability that permeates every level and function within the company. ERP Express Quality management optimizes product lifecycle management from one end of the supply chain to the other, helping you increase profitability and gain a competitive market advantage.
